Maulin Vineyard, Montussan, France

CHÂTEAU
FREYNEAU ROSÉ M

Soil : The 35 years old vines are planted on a clay limestone soil, on a hillside, which gives the berries their maturity.

Vineyard area : 1,65ha.

Vine yield : 50hecto/hectare.

Vine growing : The planting density is about 4500 plant per hectare, we work our soils mechanically and practice reasoned agriculture on the property since 1990. We do a short pruning in order to reduce our yields and obtain the best quality for our berries.

Winemaking : The harvest is done mechanically, then we use a sorting table at the winery and temperature control to follow. After a skin maceration of 6 to 8 hours, the berries are pressed to be fermented at controlled low temperature. The ageing is performed on lees for several months.

Production : 11 000 Bottles

ALCOHOL 13,5 % BY VOL. 750 ML
